

TECHNICAL INFORMATIONS

CHERAGEL – The right solution to corns problem.

Description and indications.

Dermatological gel specifically formulated to solve corns problems, very common in numerous large breeds dogs. In these animal is easy to note development of new hyperkeratosis formations located to typical skin areas (elbow, carpus, knee, hip, gluteus) due to continue body contact on hard surfaces.

Keratolytic activity of CHERAGEL allows progressive corn reduction until its complete healing. Because its content of Tea Tree Oil, well known for high antimicrobial activity, CHERAGEL prevents corn infection. Vegetal oils, included in this formulation, allow making corn softer, avoiding its break and enhancing resolution.

CHERAGEL is used with success to solve hyperkeratosis related to Leishmaniosis and in case of interdigital dermatitis.

Ingredients.

White willow bark (*Salix alba*) extract, Tea tree oil (*Melaleuca alternifolia*) extract, Ricinus oil, Almond oil, Glicerol, Water.

Suggested use

Apply a thin layer of CHERAGEL on the corn once/twice a day.

Package: 100 grams jar.
